

Metapopulation occupancy: varying alpha

$R_0 = 2.5$; $K = 10,000$; $r = 0.125$; $n_{\text{patch}} = 200$; $S(0) = K - 10$; $I(0) = 10$ per patch; $dt = 0.1$; $t_{\text{max}} = 2000$

After recovery to 100%, occupancy is treated as absorbing at 100%.
