

Conditional persistence probability

Boundary-independent comparison; rho = 0.01, theta = 0; l0 = 1

Blue points and grey bars are the existing stochastic estimates and 95% Wilson intervals. Green: leading BI; orange: combined next-order BI. No simulations were rerun.

Conditional persistence probability

Boundary-independent comparison; rho = 0.01, theta = 0.5; l0 = 1

Blue points and grey bars are the existing stochastic estimates and 95% Wilson intervals. Green: leading BI; orange: combined next-order BI. No simulations were rerun.

Conditional persistence probability

Boundary-independent comparison; rho = 0.01, theta = 1; l0 = 1

Blue points and grey bars are the existing stochastic estimates and 95% Wilson intervals. Green: leading BI; orange: combined next-order BI. No simulations were rerun.

Conditional persistence probability

Boundary-independent comparison; rho = 0.02, theta = 0; l0 = 1

Blue points and grey bars are the existing stochastic estimates and 95% Wilson intervals. Green: leading BI; orange: combined next-order BI. No simulations were rerun.

Conditional persistence probability

Boundary-independent comparison; $\rho = 0.02$, $\theta = 0.5$; $l_0 = 1$

Blue points and grey bars are the existing stochastic estimates and 95% Wilson intervals. Green: leading BI; orange: combined next-order BI. No simulations were rerun.

Conditional persistence probability

Boundary-independent comparison; rho = 0.02, theta = 1; l0 = 1

Blue points and grey bars are the existing stochastic estimates and 95% Wilson intervals. Green: leading BI; orange: combined next-order BI. No simulations were rerun.

Conditional persistence probability

Boundary-independent comparison; $\rho = 0.05$, $\theta = 0$; $I_0 = 1$

Blue points and grey bars are the existing stochastic estimates and 95% Wilson intervals. Green: leading BI; orange: combined next-order BI. No simulations were rerun.

Conditional persistence probability

Boundary-independent comparison; $\rho = 0.05$, $\theta = 0.5$; $l_0 = 1$

Conditional persistence probability

Boundary-independent comparison; rho = 0.05, theta = 1; l0 = 1

Blue points and grey bars are the existing stochastic estimates and 95% Wilson intervals. Green: leading BI; orange: combined next-order BI. No simulations were rerun.

Conditional persistence probability

Boundary-independent comparison; $\rho = 0.10$, $\theta = 0$; $l_0 = 1$

Blue points and grey bars are the existing stochastic estimates and 95% Wilson intervals. Green: leading BI; orange: combined next-order BI. No simulations were rerun.

Conditional persistence probability

Boundary-independent comparison; $\rho = 0.10$, $\theta = 0.5$; $l_0 = 1$

Blue points and grey bars are the existing stochastic estimates and 95% Wilson intervals. Green: leading BI; orange: combined next-order BI. No simulations were rerun.

Conditional persistence probability

Boundary-independent comparison; $\rho = 0.10$, $\theta = 1$; $l_0 = 1$

Blue points and grey bars are the existing stochastic estimates and 95% Wilson intervals. Green: leading BI; orange: combined next-order BI. No simulations were rerun.
