

Closed trough formula versus numerical Kendall quadrature

48-point theory grid; $\psi = 0.5$, $K = 1000$; mean absolute difference = 0.00625

θ ● 0 ▲ 0.5 ■ 1 ρ ● 0.01 ● 0.02 ● 0.05 ● 0.1

The diagonal is equality. This comparison isolates the Gaussian trough reduction on the same full nonlinear deterministic background.
