

Hybrid-duration two-state approximation: varying R0

K = 10,000; r = 0.125; alpha = 0.0001; gamma = 1; hybrid T_T; tau = 50
n_patch = 200; dt = 0.1; t_max = 2000; S(0)=K-10; I(0)=10

p(0)=P1; q(0)=observed episode-classified transient occupancy at the aligned minimum. lbar_T is deterministic, not fitted. T_T uses the l=1-or-first-trough hybrid endpoint.
