

Second-order entry x_in rho = 0.02

$$E_{\text{abs}} = \left| X_{\text{in}}^{(2)} - X_{\text{in}}^{\text{ODE}} \right|, \quad E_{\text{rel}} = \frac{\left| X_{\text{in}}^{(2)} - X_{\text{in}}^{\text{ODE}} \right|}{\left| X_{\text{in}}^{\text{ODE}} \right|}$$

Second-order entry x_in rho = 0.04

$$E_{abs} = \left| X_{in}^{(2)} - X_{in}^{ODE} \right|, \quad E_{rel} = \frac{\left| X_{in}^{(2)} - X_{in}^{ODE} \right|}{\left| X_{in}^{ODE} \right|}$$

Second-order entry x_in rho = 0.06

$$E_{abs} = \left| X_{in}^{(2)} - X_{in}^{ODE} \right|, \quad E_{rel} = \frac{\left| X_{in}^{(2)} - X_{in}^{ODE} \right|}{\left| X_{in}^{ODE} \right|}$$

Second-order entry x_in rho = 0.08

$$E_{abs} = \left| X_{in}^{(2)} - X_{in}^{ODE} \right|, \quad E_{rel} = \frac{\left| X_{in}^{(2)} - X_{in}^{ODE} \right|}{\left| X_{in}^{ODE} \right|}$$

Second-order entry x_in rho = 0.10

$$E_{abs} = \left| X_{in}^{(2)} - X_{in}^{ODE} \right|, \quad E_{rel} = \frac{\left| X_{in}^{(2)} - X_{in}^{ODE} \right|}{\left| X_{in}^{ODE} \right|}$$
