

One-patch stochastic extinction: varying R_0

Fixed $K = 10,000$; $r = 0.125$; $n_{\text{patch}} = 1$; $\alpha = 0$; $\gamma = 1$; $dt = 0.1$; $t_{\text{max}} = 200$; $\text{nsim} = 1000$; Poisson mean $I(0) = 10$

Dashed vertical line marks the baseline R_0 . Mean extinction time is conditional on extinction by t_{max} .
