

One-patch stochastic extinction: varying r

Fixed $R_0 = 2.5$; $K = 10,000$; $n_{\text{patch}} = 1$; $\alpha = 0$; $\gamma = 1$; $dt = 0.1$; $t_{\text{max}} = 200$; $n_{\text{sim}} = 1000$; Poisson mean $I(0) = 10$

Dashed vertical line marks the baseline r . Mean extinction time is conditional on extinction by t_{max} .
