

# Conditional persistence at trough 1

$K = 10,000$ ;  $I(0) = 1$ ;  $y_{BL} = r(R_0 - 1)/R_0^2$ .  $P_j$  is conditional on reaching trough  $j$ ; early stochastic fizzle is excluded.  
Grey cells mean that the  $j$ -th deterministic boundary entry was not found or defined.
